HTML and CSS

Updated Study Material

Course Overview

HTML is used to structure web pages, while CSS is used to style and design them.

Chapter 1: Introduction to HTML

HTML uses tags to define elements like headings, paragraphs, links, and images.

Example: <h1>Hello World</h1>

Chapter 2: Introduction to CSS

CSS controls layout, colors, fonts, and responsiveness of web pages.

Example: h1 { color: blue; }

Chapter 3: Linking CSS with HTML

CSS can be added inline, internally, or externally to HTML pages.

Practice Questions

1. What is HTML used for?
2. Write one simple CSS rule.
