JavaScript

Updated Study Material

Course Overview

JavaScript is a scripting language used to make web pages interactive and dynamic.

Chapter 1: Introduction to JavaScript

JavaScript runs in the browser and responds to user actions.

Example: alert('Hello!');

Chapter 2: Variables and Data Types

Variables store values using var, let, or const.

Example: let x = 5;

Chapter 3: Functions

Functions are reusable blocks of code.

Practice Questions

1. What is JavaScript used for?
2. Write one example of a variable in JavaScript.
