Artificial Intelligence

Updated Study Material

Course Overview

Artificial Intelligence (AI) focuses on creating systems that can perform tasks requiring human intelligence such as learning and decision-making.

Chapter 1: Introduction to AI

AI enables machines to think, learn, and act intelligently.

Example: Voice assistants like chatbots.

Chapter 2: Types of AI

Types include Narrow AI, General AI, and Super AI.

Chapter 3: Applications of AI

AI is used in healthcare, finance, education, and automation.

Practice Questions

1. What is Artificial Intelligence?
2. Name any one application of AI.
